- A Games4theworld.org initiative

The Sims 3 is a very popular [®] Games4theworld download and we got a lot of requests from people who wanted to install the game on a Mac, but didn't know how.

Well, here's the guide on how to do just that! In this guide we'll show you how to install The Sims 3 base game and the expansions on a Mac. All expansions are installed pretty much the same way.

This guide is still in "beta", so if you run into any problems or have any questions using this guide, please post them on our Forum: www.games4theworld.bestgoo.com or send an e-mail to Games4theworld@hotmail.com, so we can update the guide. Thank you!

This guide consists of 4 parts:

- 1] Installing the base game
- 2] Converting expansion packs into .dmg format
- 3] Installing expansion packs
- 4] Applying the crack (only if you have installed at least one expansion pack)

PART 1 - Installing the base game

[1] Download The Sims 3 base game from here: http://thepiratebay.se/torrent/5061019/The_Sims_3_(Mac__cracked) (or via a proxy <u>here</u>)

[2] Unzip the file to get "The Sims 3.app".

(If you are unable to unzip with Mac's Archive Utility, please download "The Unarchiver" here: http://wakaba.c3.cx/s/apps/unarchiver.html)

And we are done! Move on to the next section to install the wonderful expansion pack(s) that The Sims 3 has to offer!

PART 2 - Converting expansion packs into .dmg format

This section is meant for players who have downloaded their expansion packs (EPs) in .rar format (e.g. Games4theworld's versions). It is necessary to convert them to .dmg format before proceeding.

[Note: if you have downloaded your EPs in .iso format, you may skip this section and move on to Part 3: Installing expansion packs.]

[1] Extract the .rar file. For this to work, you **MUST** use Stuffit Expander, which can be down-loaded from here: http://www.stuffit.com/mac-expander.html

[2] Now, check the file size of the extracted folder.

[3] We will now create the .dmg file. To do this, open up 'Disk Utility' from the 'Applications' folder. Select 'New Image' from the Disk Utility.

Save As: (anything you wish to call it) Name: (anything you wish to call it) Size: at least 0.1 GB larger than the file size noted in Step 2. Partitions: CD/DVD

Click "Create".

[4] Now, the .dmg image we just created will be empty. Copy all the contents ([cmd]+[a] to select all files) of your extracted folder into the .dmg image. And we are ready to install!
